**little wonderings**

Cell  
by Khafri Mau, 4 year old boy

wondering little hands and fingers explore  
reds and yellows,  
smooth and fuzzy,  
amoebic ovals and circles.

helical lines, unrestricted and free.  
cells, nucleus, cytoplasm, vesicles, synapses  
combined through intertwined filaments of

cellulose

actin

networks

roots

and

highways.

Innocent interpretation continue, unintimidated and unconstrained.

Flow of lines and thoughts,

stream through squeals and laughter,

crisps crunch of wax, clay, carbon and paint.

little wonderings

Nerve  
by Khafri Mau,  
4 year old boy

Tan, little wonderings
