

Eco-Tensions:

**Why some Environmentalists may support
Destructive Intergroup Behaviour (DIB)**

Emil Dzhunushaliev | Department of Psychology

MODEL

VARIABLES

X

Politicized Ingroup Identity

The individual's level of identification with environmental activists

M1

Ingroup Efficacy

The degree to which individuals believe environmental activists can solve their shared problems

M2

Punishment Efficacy

The degree to which individuals believe they can effectively punish outgroup members

M3

Outgroup-directed Emotions

Emotions felt on behalf of the group directed at outgroup members, including anger and contempt

M4

Ingroup-directed Emotions

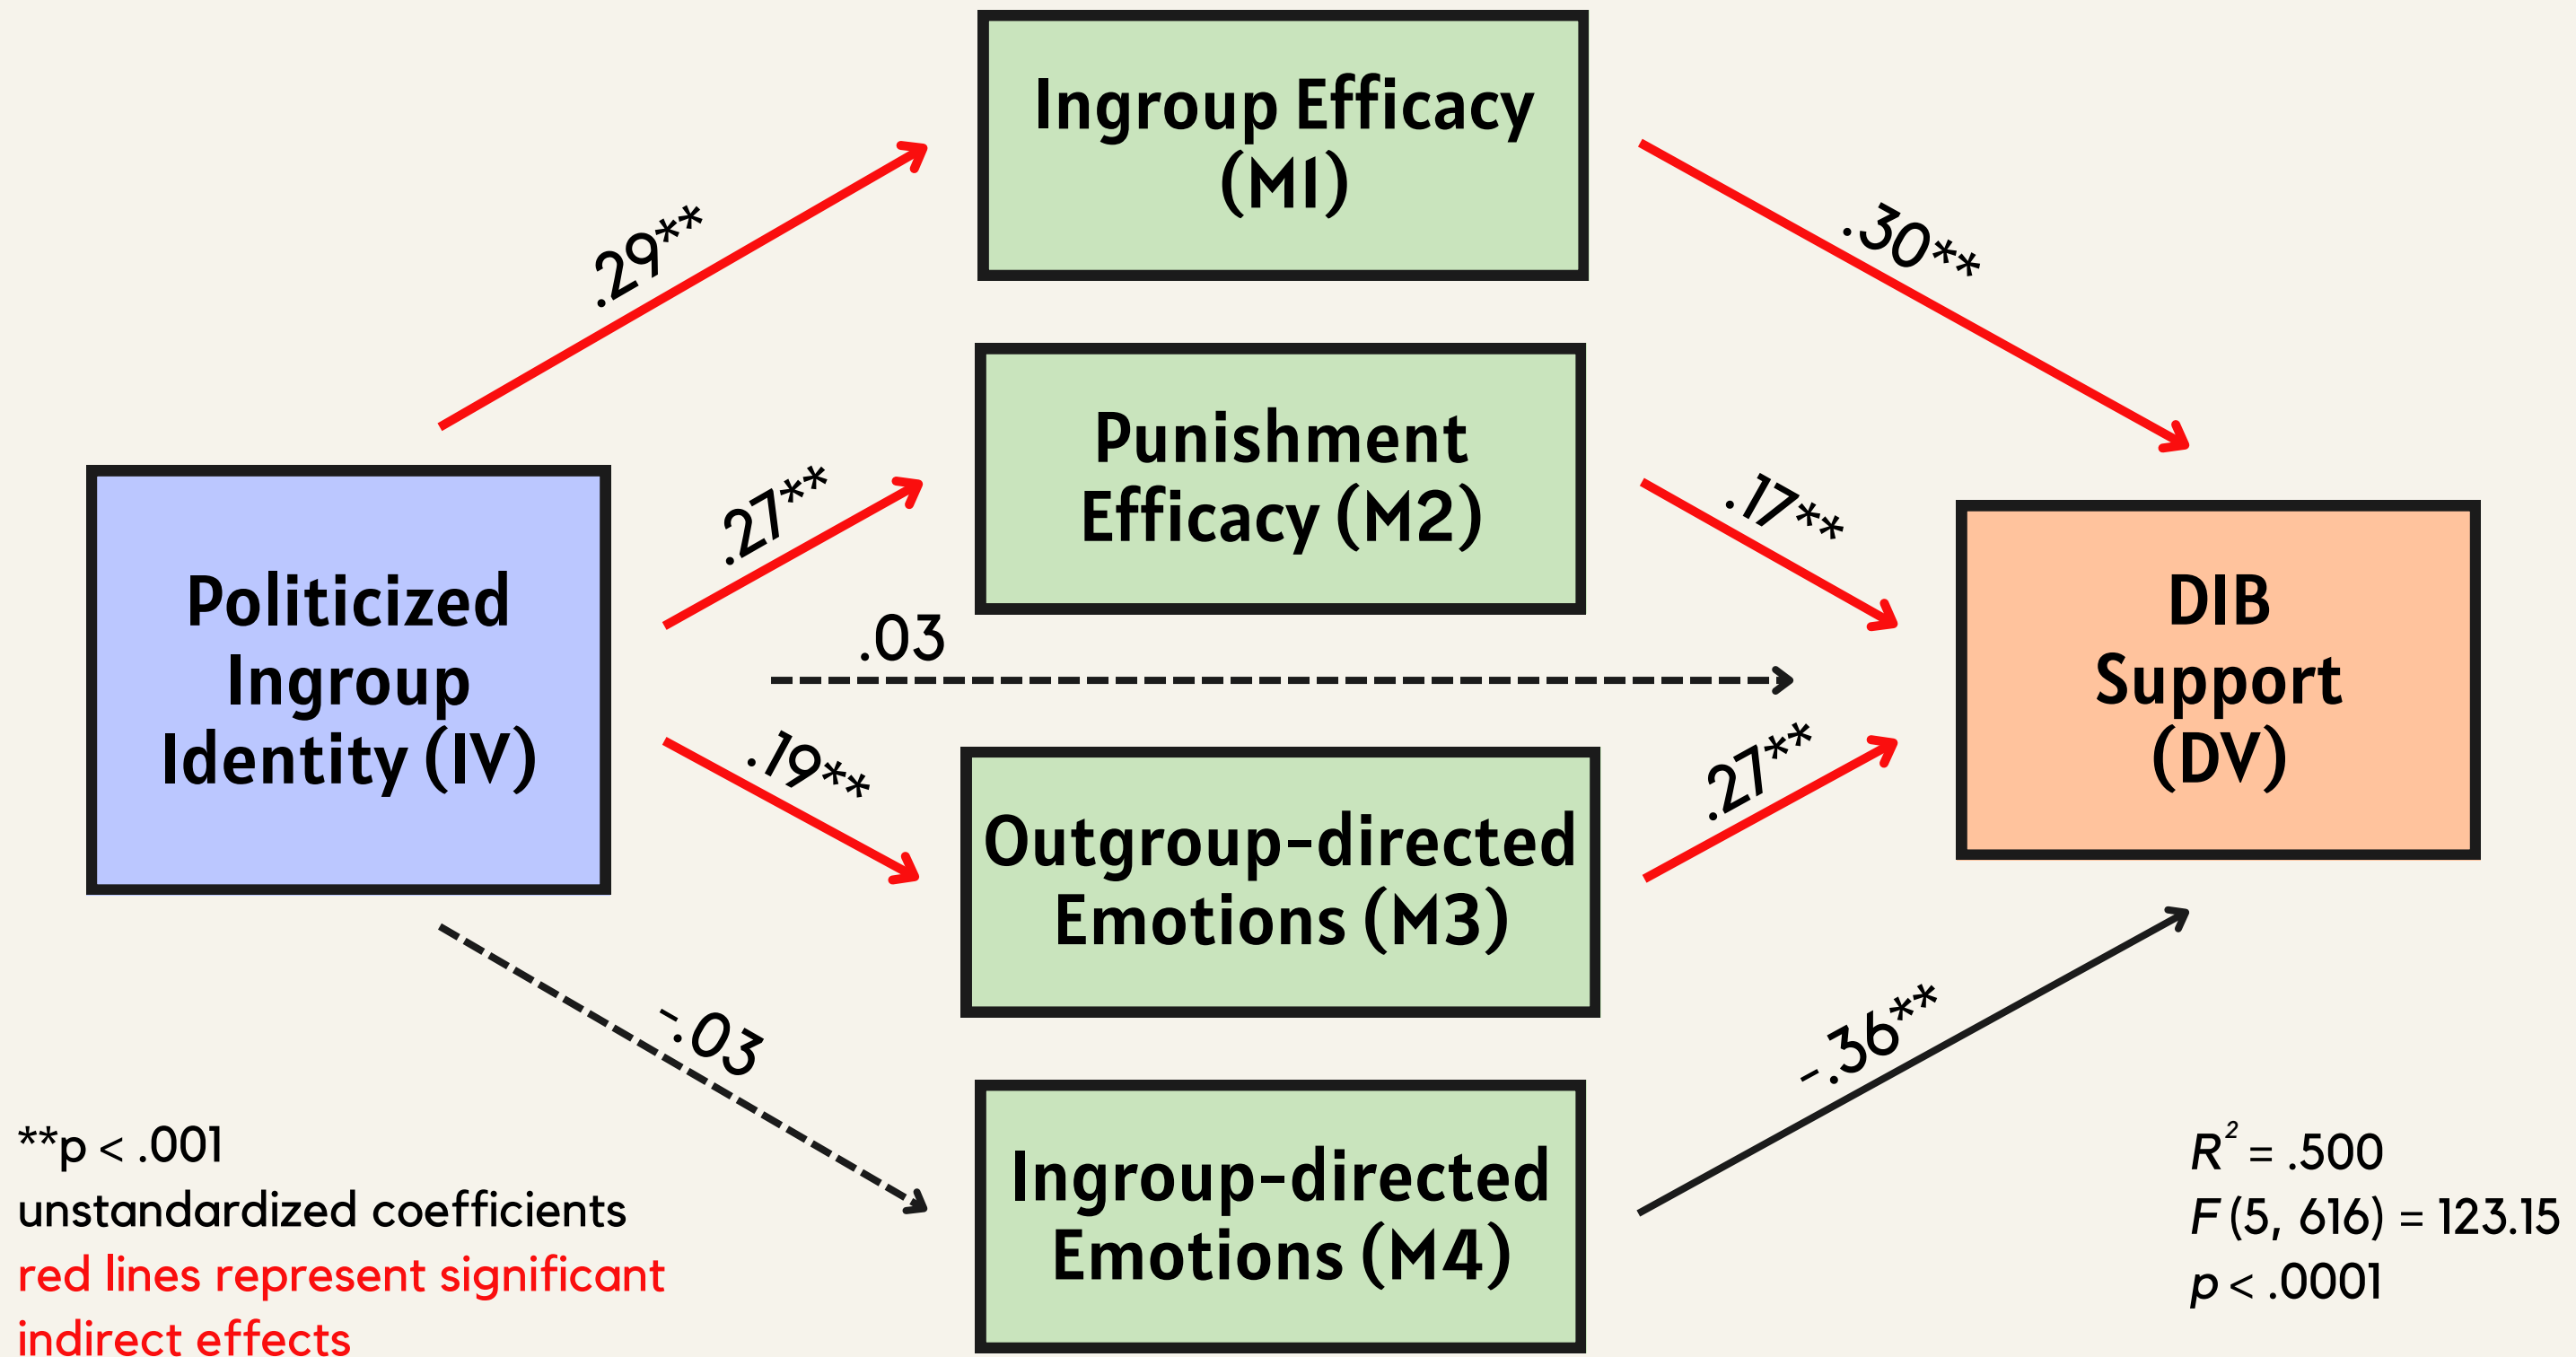

Emotions felt on behalf of the group directed at ingroup members, including guilt and shame

Y

DIB Support

The degree to which individuals support DIB

MODEL - RESULTS

FUTURE DIRECTIONS

- **Undergraduate sample (relatively new members of the environmental movement)**
- **Participants live in Canada, a country that is less affected by climate change compared to the rest of the world**
- **More research needed on other groups**
